

ALCOHOLOMETERS

Code KLB001_KLB024

- Alcoholometers are a type of hydrometer designed to measure alcoholic richness of liquids giving results in percentage of alcohol in volume.
- Nahita offers this series of alcoholometers according to Gay Lussac (% alcohol volume) as well as an alcoholometer that also presents the Cartier scale (arbitrary scale in which 0 °Cartier correspond to pure water and 44 °Cartier correspond to absolute ethanol).
